The front desk can check the patient in, accept co-pay/pre-payment and provide a printed receipt. They can see any outstanding balances on the account, and flag their arrival.

The Open Encounter screen tells the providers and staff where the patients are at within the office. It also identifies which patients have already been seen by the provider, and forwards their encounter to the biller to complete the charge transaction

The Patient Chart allows easy access to all pertinent clinical information. Review previous encounter notes, test tracking data, current and past medications, evaluate and graph existing vital records, and view all electronic documents tied to the patient. It also allows for easy access to additional supplementary information including allergies, RHCM, problems, immunizations due, etc.

AMS understands that most providers have been practicing for years and have specific forms that they have been accustomed to. During the training process, included with the purchase of an AMS system, we will show each practice how to take their paper forms and create them as electronic documents. The only difference for the provider is that they are documenting on a computer instead of paper, making the transition from paper to electronic an easy process. Key phrases and conditionals are setup to allow a point and click type of entry for quick documentation. E&M coding can be setup with each macro/template to suggest the proper level of coding during the patient encounter.

Diabetes Overview

Almost everyone knows someone who has diabetes. An estimated 23.6 million people in the United States – 7.8 percent of the population – have diabetes, a serious, lifelong condition. Of those, 17.9 million have been diagnosed, and about 5.7 million people have not yet been diagnosed. Each year, about 1.6 million people aged 20 or older are diagnosed with diabetes.

Interaction checking pulls the patient's active problems, allergies and current medications from the AMS patient chart for full review. Any interactions found will display documentation that can be reviewed or printed out to provide to the patient. Easily search and select local pharmacies to submit prescriptions electronically.

Electronic documents are key to a paperless office! AMS allows you to import a wide variety of documents. You may choose to import diagrams that can be easily marked on, Dicom images, x-rays, pictures or paperwork that you would like to store electronically in a patient's chart for easy access and retrieval. Our scanner queue allows multiple documents to be pulled in at one time and attached to a patient's chart.

Diagnosis / Procedures Additional Information

Enter Copay / Pre-Pay SAVE EXIT

Upon completion of the encounter, the diagnosis and procedure codes that were selected during the visit are electronically sent to the charge screen for instant retrieval by your biller. No need to re-key co-pay/pre-pay information taken during check-in or re-enter diagnosis and procedure codes previously selected during the encounter. This removes the need to generate paper superbill encounter forms saving the office time and money. If you outsource your billing, AMS generates an electronic encounter report that can be easily emailed or faxed itemizing everything needed to create a charge encounter.

The Word Processor/Report Writer is a valuable tool for any practice. Quickly generate case study reports or letters to patients matching specified criteria. Report templates can be saved and easily accessed for instant retrieval. You can search on a combination of Demographics, Supplementary data, Encounter notes, Prescriptions, Tests, RHCM, Vaccinations or Problems for an unlimited combination of reports or letters.

# American Medical Software

American Medical Software provides "Affordable & Reliable" Medical Office Software solutions to physicians in all specialties. Since 1984, we have implemented and supported our systems in thousands of medical practices throughout the nation.

American Medical Software's premier system, "Practice Management ULTRA" is the ultimate in medical office software. It offers integrated workflow throughout the practice. This package features Appointment Scheduling, Electronic Patient Charts with e-Prescribing, Billing with Electronic Claims Filing and much, much more. These modules are also available as standalone systems.

For further information, to schedule a demo or to simply obtain a list of clients who have successfully implemented a Practice Management System, contact American Medical Software at 800-423-8836, or visit [www.americanmedical.com](http://www.americanmedical.com)
